

Safe waste treatment guideline for self-quarantined people before confirmed with COVID-19

1

Use specific medical waste bags

A B

2

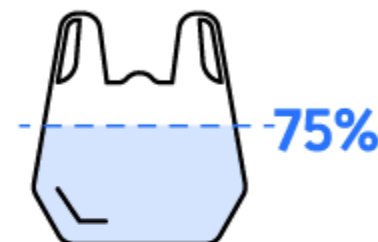

Spray a disinfectant both inside and surface of the waste bags

C D

3

Do not fill over 75% of a waste bag

E

4

Do not dispose of the wastes without notice. Store them at home

F

5

Call your local public health care center for disposal

G

6

Put the filled medical waste bag into a standard garbage bag before disposal

H I

- A Put household wastes including food wastes into specific medical waste bags.
- B If you are not yet provided with specific medical waste bags, use standard garbage bags instead.
- C Every time you put wastes in a waste bag, spray a disinfectant both inside and surface of the bag.
- D Spray a disinfectant on the surface of the medical waste bags at least once a day.
- E Fill only 75% of a waste bag for sealing. Seal when a waste bag is 75% filled.
- F Store the filled waste bags in a place at home.
- G Call your local public health care center or local government office for disposal. Never dispose of the wastes without notice.
- H Before disposing, put the filled medical waste bag into a standard garbage bag and spray a disinfectant on the surface again.
- I The disposed wastes will be taken by collecting agents and treated in a safe way. (No charge for disposal)

Q. If you develop COVID-19 suspected symptoms while in self-quarantine.

1. Make sure to notice your symptoms to your local public healthcare center or the local government office while following the above guideline.
2. Your local government will take your wastes free of charge and treat them in a safe way.

**Safe waste treatment
guideline**
for self-
quarantined people
after confirmed
with COVID-19

1

Use specific
medical waste bags

A B

2

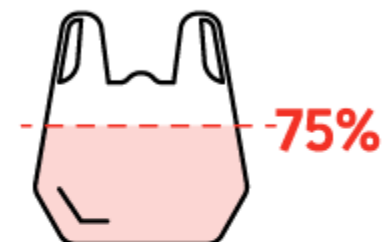

Spray a disinfectant
both inside and surface
of the waste bags

C D

3

Do not fill over 75%
of a waste bag

E

4

Store the waste bags
in a specific synthetic resin container

F

5

The wastes will be treated after you are transported to
a residential treatment center or a hospital

G H

- A** Put household wastes including food wastes into specific medical waste bags.
- B** If you are not yet provided with specific medical waste bags, use standard garbage bags instead.
- C** Every time you put wastes in a waste bag, spray a disinfectant both inside and surface of the bag.
- D** Spray a disinfectant on the surface of the medical waste bags at least once a day.
- E** Do not fill over 75% of the waste bag for sealing. Seal when a waste bag is 75% filled.
- F** After sealing a filled medical waste bag, put it into a specific synthetic resin container.
- G** When you are transported to a residential treatment center or a hospital, notice your local public healthcare center of local government office of the wastes stored in the specific containers. They will be collected and treated free of charge.
- H** If you want to dispose of the wastes before you are transported, ask your local healthcare center or the local government office.

Caution! In using the specific synthetic resin containers,

Once closed by the lid, the specific synthetic resin container becomes locked and cannot be opened.
Be careful not to close a container with the lid until its disposal.
